Assignment 01

Create a simple website using HTML5 for a **Hotel**. Given below are the requirements highlighted by the owner of the Hotel.

Each web page of the website should contain a **header** that:

- Contains the **Hotel's name** and **logo.**

Home Page :

- The landing page of the website.
- It contains two sections namely, the **gallery** and **our services**.

About Us :

- It contains a small description about the hotel.

Facilities :

- It contains two sections namely, **Banquets** and **Rooms.**

Contact Us :

- Include the address and contact no. of *Hotel*.
- Include an **HTML Form** that contains the name, email address, contact no., subject, and message of the customer who is making an inquiry. It should also contain a submit button.
- Include a radio button where the customer needs to select whether he/she is a new customer or an already visited customer.
- Embed a Google Map with the **Hotel's location**.
- Include a marker on the map indicating the exact location.

Each web page of the website should contain a **Footer** that:

- Contains the *Hotel*'s contact information (address, phone number, email).
- Contains links to the *Hotel*'s social media pages.
- Include an embedded contact form with fields for name, email, subject, and message.
- Add a "*Subscribe to Newsletter*" section with an email input field and a subscribe button.

Other Requirements :

- Use HTML5 semantic elements to enhance accessibility and readability.
- Use appropriate alt attributes for images and ensure text content is easy to read.
- The HTML code should be well-organized, properly indented, and easy to understand.
- Include a navigation bar that remains at the top of the page while scrolling.
